

eViewer

A window on the patient's clinical history

eViewer is the Exprivia solution for consulting patient clinical data such as radiographic images, biometric traces, videos and reports stored in the centralized PACS system. Thanks to **eViewer**, the distribution of such data will be possible both inside the health facility (between departments) and outside (on the territory), ensuring the security of access and respect for privacy.

Features

eViewer is a zero footprint tool developed in **HTML5** reactive technology and does not require any installation. This makes it usable on any support (**PC, Tablet, Smartphone**) even in mobile mode with **responsive interfaces**, and on any operating system (**Windows, Linux, MacOS, IOS, Android, Winmobile**).

The type of data and formats supported includes **PDF, CDA2, DICOM, JPEG, MPEG4**.

eViewer supports all major browsers (**Microsoft Edge, Google Chrome, Mozilla Firefox, Apple Safari**).

Access to data with **eViewer** takes place in **secure https mode**, ensuring security in the activation of the viewer and in the transmission of information.

eViewer also allows the **management of privileges** for different user profiles - for example, a general practitioner will be able to consult the list of reports of one of his patients and view further diagnostic documents.

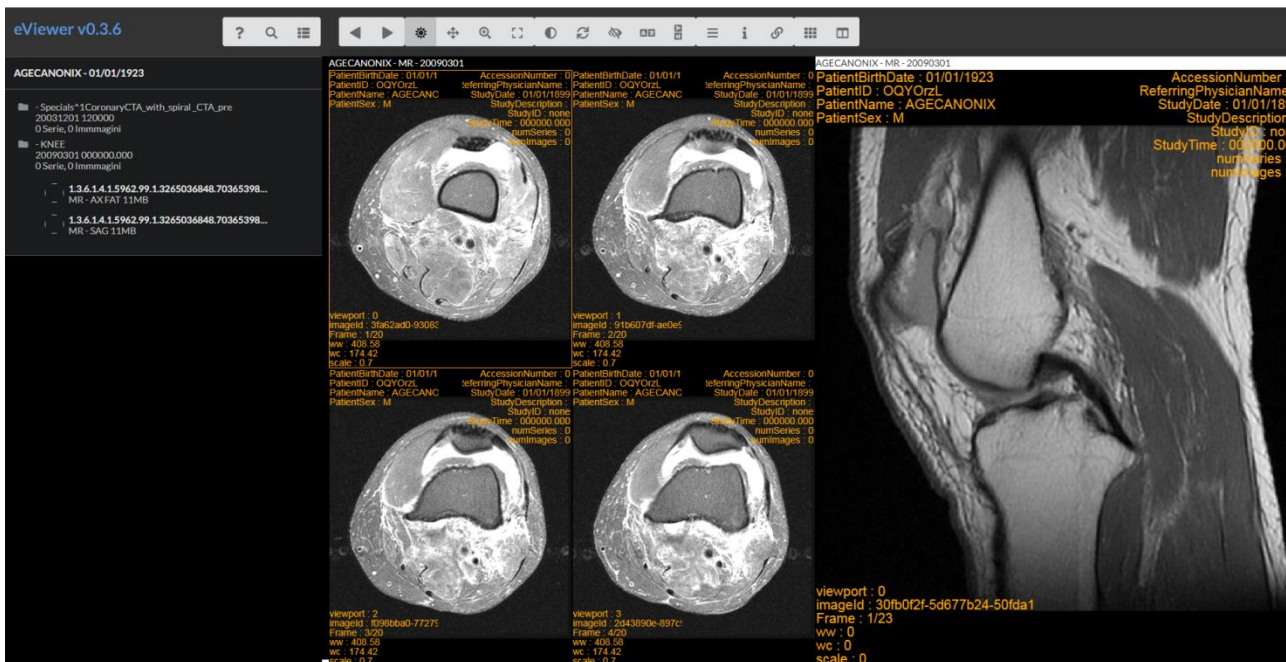

eViewer, which can also be invoked by third party applications which are supplied with context parameters and technical specifications, allows, in the initial screen, to select the patient. The data can be sorted by selecting the header of each column and it is possible to configure which data / columns to display.

Functionality

eViewer is equipped with imaging capabilities for consulting DICOM images such as:

- Window/Level
- WL preset
- Zoom
- Pan
- Rotation
- Mirroring
- Lens
- Measurement of angles and distances
- Ellipses

eViewer also allows you to view videos, even of great length, thanks to the streaming mode, as well as biometric traces (for example ECG) and associated reports or other documents.

The products: eArchive, eLifeCare, eRis/eVisit, eViewer, eWard, MedStation are CE⁰⁴⁷⁶ (93/42 / EEC) certified Medical Devices of class IIA.

The complete list of certified model versions can be obtained by contacting Exprivia.

eViewer is included in the e4cure suite in the AGID catalogue of qualified SaaS services.
