

EXPRIVIA|ITALTEL SOLUTIONS FOR OBSERVING THE PLANET EARTH

The group presents its Aerospace & Defence solutions at the Living Planet Symposium in Milan sponsored by ESA

13 May 2019 - Exprivia | Italtel will present its solutions in the **Aerospace & Defence** field at the **Living Planet Symposium 2019**, a triennial event organised by the European Space Agency (ESA). This year it is dedicated to the theme of "Observing Earth" and will be held at **MiCo - Milano Congressi from 13 to 17 May**.

The group will discuss its solutions which make use of **satellite data** and **virtual reality to observe the earth and other planets**, aimed at monitoring environmental pollution, hydrogeological risks and **maritime traffic**.

The extensive experience of Exprivia|Italtel in the civil and military sectors, combined with its skills acquired in the aerospace sector thanks to the acquisition of ACS Advanced Computer Systems S.r.l. in 2016, have allowed the company to not only create systems for observation, but also for defence and prevention. Information and Communication Technology is currently the best tool for monitoring the protection of the planet earth and that of men, cities, infrastructure and transport, as well as a fundamental support for making strategic decisions in critical situations requiring prevention, monitoring and control actions.

The group has also developed systems for the protection and security of the territory and risks relating to the environment, people and transport by air, land and sea that are used by the major international agencies, providing solutions for the management and processing of geospatial data.

The correlations between data collected by satellites or on the ground through a multitude of sensors are analysed and displayed through effective and intuitive graphic presentations, with solutions that make it possible to obtain, also through the use of augmented reality techniques, a real-time and remote overview of the situation (*situational awareness*) of everything happening minute by minute, for example in the fields of maritime scenery studies.

The projects developed by the Aerospace & Defence Unit of Exprivia | Italtel will be presented at the company's exhibition space at booth no. 37 - Level 0.

EXPRIVIA|ITALTEL

Exprivia|Italtel is an international group specialized in Information and Communication Technology able to direct drivers of change in the business of its customers thanks to digital technologies. With a know-how and experience gained in over 30 years of constant presence on the market, Exprivia has a team of experts specializing in various fields of technology and in the main areas within this sector, from the Capital Market, Credit & Risk Management to IT Governance, from BPO to IT Security, from Big Data to Cloud, from IoT to Mobile, to SAP. The group supports its clients in the Banking & Finance, Telco & Media, Energy & Utilities, Aerospace & Defense, Manufacturing & Distribution, Healthcare and Public-Sector sectors. The solutions are made up of own and third-party products, engineering services and consultancy.

Listed on Borsa Italiana Stock Exchange since 2000 to the STAR MTA (XPR) segment.

Today the group Exprivia and Italtel has about 4000 professionals distributed in over 20 countries worldwide.
